## SKYART FINE PRINT

We have revolutionized what can be done with canopies in terms of art. We are now printing logos straight onto the ZP, and are leading the way with SkyArt in this field.

There are a variety of benefits to creating logo canopies and SkyArt this way:

- Complex designs such as photos, fine detail graphics, shades and fading.
- Full spectrum of colours are achievable.
- No increase in pack volume or additional stitching.

Here are a few things you need to know about printed logos and SkyArt designs.

### 1. DESIGN

Take advantage of the fact that you can have anything on your canopy. Forget simple block letters and one or two colours. Our process has the capacity to do complex, multi-coloured designs that could not be achieved by the more traditional 'applique' method of logo application. If you have artwork that you would like to see mocked up on a canopy template, please send it with a brief description of how you'd like the canopy and logo to look (size and position) - see contact details below. Hot tip: Vector based artwork is best as it can be scaled to large sizes without quality loss. Or very high resolution images. We do have the capacity to redraw artwork in vector if required, this may have additional cost involved.

### 2. PRICING - SEE SKYART PRICE GUIDE

Printing cost is per meter, so it's true that the bigger the canopy and the more cells that are printed, the more expensive it will be. If you want to cover your whole canopy, that's great, but try and use up all the space to your advantage. Pricing is based on one off designs, for multi canopy pricing - see contact details below.

### 3. COLOURS - CANOPY AND ART

While we can print any colour with our process, there are a few technical considerations. Printing coloured artwork is only possible onto white fabrics as the print density is not great enough to overcome the colour in pre-dyed fabric we use.

All ZP fabric we use is reasonably translucent. This means that if you have coloured panels on the upper surface and/or internal ribs and X-braces in the canopy, light shining through the canopy from above will project those colours onto the lower surface which in turn can affect the colour and definition of the logo on the lower surface.
